Claim Rejections - 35 USC § 112

Claims 1-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 5, recites "basically three layers," which is indefinite since it is unclear whether the limitations that follows "basically" are part of the claimed invention.

In claim 9, line 3, "the wires" lacks antecedent basis.

Claim Rejections - 35 USC § 102

Claims 1, 2, 8, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by GB 2033831.

Referring to Fig. 2, BG'831 discloses a rectangular stamping device with a heated central layer 15 of metal with bores 16, 17 in which electric heaters are placed and therefore or relatively good thermal conductivity, flanked by two layers 19 (above and below).

Claim Rejections - 35 USC § 103

Claims 3-5, 9, 11, and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over GB'831.

The claims differ from GB'831 only in calling for the central metal layer to be copper or aluminum, a thickness of about 20 mm, heating wires, a circular stamp, or square shape with edge length of 300 mm. However, these limitations do not patentably distinguish the claimed invention from the prior art. GB '831 is silent on the kind of metal forming the central layer, but a central metal layer of copper or aluminum would have been immediately obvious since it distributes heat over the area of the stamp, and good thermal conductivity would have been required. Wire heater means are conventional and commended by their economy at least, and the central layer thickness and specific shape and size would have been determined strictly by the particular workpiece size and shape.

Allowable Subject Matter

Claims 6, 7, and 12-14 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
